

| Name of Faculty      | : | Faculty of Engineering & Technology |
|----------------------|---|-------------------------------------|
| Name of Program      | : | Master of Technology (M. Tech)      |
| Course Code          | : | 2MSE02                              |
| Course Title         | : | Advanced Compiler Design (PE - II)  |
| Type of Course       | : | PE                                  |
| Year of Introduction | : | 2023-24                             |

| Prerequisite     | :   | Compiler Design Basics and Data Structure Algorithm   |  |  |  |  |
|------------------|-----|---|--|--|--|--|
| Course Objective | :   | The course objectives for an Advanced Compiler Design course may                              |  |  |  |  |
| ,                |     | vary depending on the institution and the instructor's preferences.                           |  |  |  |  |
|                  |     | However, here are some common objectives you might find in                                    |  |  |  |  |
|                  |     | such a course: Explore Advanced Compiler Techniques, Study                                    |  |  |  |  |
|                  |     | Compiler Optimization, Understand Language Semantics and                                      |  |  |  |  |
|                  |     | Analysis, Investigate Just-In-Time (JIT) Compilation, Study                                   |  |  |  |  |
|                  |     | Compiler Backends and Code Generation etc.  |  |  |  |  |
| Course Outcomes  | :   | At the end of this course, students will be able to:  |  |  |  |  |
|                  | CO1 | Specify and analyse the lexical, syntactic and semantic structures                            |  |  |  |  |
|                  |     | of advanced language features.  |  |  |  |  |
|                  | CO2 | Separate the lexical, syntactic and semantic analysis into meaningful                         |  |  |  |  |
|                  |     | phases for a compiler to undertake language translation.                                      |  |  |  |  |
|                  | CO3 | Write a scanner, parser, and semantic analyser without the aid of automatic generators.       |  |  |  |  |
|                  | CO4 | Turn fully processed source code for a novel language into machine code for a novel computer. |  |  |  |  |
|                  | CO5 | Describe techniques for intermediate code and machine code optimization.                      |  |  |  |  |
|                  | CO6 | Design the structures and support required for compiling advanced language features.          |  |  |  |  |

#### Teaching and Examination Scheme

| Teaching Scheme (Contact |        | Credits | <b>Examination Marks</b> |                  |     |                              |     |       |       |

Legends: L-Lecture; T-Tutorial/Teacher Guided Theory Practice; P – Practical, C – Credit, SEE – Semester End Examination, CIA – Continuous Internal Assessment (It consists of Assignments/Seminars/Presentations/MCQ Tests, etc.))

## Course Content

| Unit No. | Topics  | Teaching<br>Hours | Weightage | Mapping<br>with CO |
|----------|---|-------------------|-----------|--------------------|
| 1        | Language Translation Overview<br>Overview of system software used during<br>translation –language processors, linker, loader.<br>Types of language processors –assembler,<br>interpreter, compiler. Difference between<br>interpreter, assembler and compiler. Overview<br>and use of linker and loader, model of<br>compilation, The Phases of a Compiler, The<br>Grouping of Phases, Compiler-Construction Tools  | 06                | 05%       | CO2                |
| 2        | Lexical Analysis<br>The Role of the Lexical Analyser, regular<br>expression, regular languages, Input Buffering,<br>Specification of Lexemes, Tokens and pattern.<br>Recognition of Tokens, A Language for<br>Specifying Lexical Analysers, Finite Automata,<br>From a Regular Expression to an NFA, Design of<br>a Lexical Analyser Generator, Optimization of<br>DFA-Based Pattern Matchers.  | 09                | 14%       | CO1                |
| 3        | Syntax Analysis<br>The Role of the Parser, Context-Free Grammars,<br>writing a Grammar, Top-Down Parsing, Bottom-<br>Up Parsing, Operator-Precedence Parsing, LR<br>Parsers, Using Ambiguous Grammars, Parser<br>Generators.  | 15                | 23%       | CO2                |
| 4        | Syntax-Directed Translation<br>Syntax-Directed Translation<br>Syntax-Directed Definitions, Construction of<br>Syntax Trees, Bottom- Up Evaluation of S-<br>Attributed Definitions, L-Attributed<br>Definitions, Top-Down Translation, Bottom-Up<br>Evaluation of Inherited Attributes, Recursive<br>Evaluators, Analysis of Syntax-Directed<br>Definitions, Type Systems, Specification of a<br>Simple Type Checker, Equivalence of Type<br>Expressions, Type Conversions, Overloading of<br>Functions and Operators. | 05                | 08%       | CO3                |
| 5        | Memory Allocation, Organization and Memory<br>ManagementSource Language Issues, Storage Organization,<br>Storage-Allocation Strategies, and Access to Non<br>local Names, Parameter Passing, and Language<br>Facilities for Dynamic Storage Allocation,<br>Dynamic Storage Allocation Techniques.<br>Activation Tree, Activation Record, Parameter<br>Passing, Symbol Table, Static, Dynamic And  | 07                | 14%       | CO4                |

|   | Heap Storage Allocation, Garbage Collection.   |    |     |     |
|---|--|----|-----|-----|
| 6 | Intermediate Code Generation<br>Intermediate Languages, Declarations,<br>Assignment Statements, Boolean Expressions,<br>Case Statements, Back patching, Procedure<br>Calls, Types of Intermediate Forms of the<br>Program.   | 05 | 08% | CO5 |
| 7 | Code Optimization<br>The Principal Sources of Optimization,<br>Optimization of Basic Blocks, Loops in Flow<br>Graphs, Introduction to Global Data-Flow<br>Analysis, Iterative Solution of Data-Flow<br>Equations, Linear optimization (peep hole)<br>Techniques, parse optimization Techniques<br>and structured optimization techniques. Code-<br>Improving Transformations, Dealing with<br>Aliases, Data-Flow Analysis of Structured Flow<br>Graphs, Efficient Data-Flow Algorithms, A<br>Tool for Data-Flow Analysis, Estimation of Types,<br>Symbolic Debugging of Optimized Code | 06 | 08% | CO5 |
| 8 | Code Generation<br>Issues in the Design of a Code Generator, The<br>Target Machine, Run- Time Storage<br>Management, Basic Blocks and Flow Graphs,<br>Next-Use Information, A Simple Code<br>Generator, Register Allocation and Assignment,<br>The DAG Representation of Basic Blocks,<br>Peephole Optimization, Generating Code from<br>DAGs, Dynamic Programming Code-<br>Generator Algorithm, Code-Generator<br>Generators.   | 04 | 08% | CO6 |
| 9 | Symbol Table Management<br>General concepts, Symbol Table as a data structure,<br>Various operations performed on Symbol Table,<br>Symbol table organizations for blocked structured<br>language and non-blocked structured language.  | 05 | 12% | CO6 |

| Suggested Distribution of Theory Marks Using Bloom's Taxonomy |             |               |             |         |          |        |
|---|-------------|---------------|-------------|---------|----------|--------|
| Level   | Remembrance | Understanding | Application | Analyse | Evaluate | Create |
| Weightage   | 40          | 20            | 20          | 10      | -        | 10     |

NOTE: This specification table shall be treated as a general guideline for the students and the teachers. The actual distribution of marks in the question paper may vary slightly from above table.

Document Version: 1.0

#### Suggested List of Experiments/Tutorials

| Sr. No. | Name of Experiment/Tutorial  | Teaching<br>Hours |
|---------|--|-------------------|
| 1       | Importance/Rationale behind the CD Lab.  | 01                |
| 2       | Objectives & Outcomes.   | 01                |
| 3       | Software / Hardware Requirements.  | 01                |
| 4       | <b>Case Study:</b> Description of the Syntax of the source Language (mini language) for which the compiler components are designed.      | 02                |
| 5       | Write a C Program to Scan and Count the number of characters, words, and lines in a file.  | 02                |
| 6       | Write a C Program to implement NFAs that recognize identifiers, constants, and operators of the mini language.                           | 02                |
| 7       | Write a C Program to implement DFAs that recognize identifiers, constants, and operators of the mini language.                           | 02                |
| 8       | Design a lexical analyzer for the given language. The lexical analyzer should ignore redundant spaces, tabs and new lines, comments etc. |                   |
| 9       | Implement the lexical analyzer using JLex, flex or other lexical analyzer generating tools.  | 01                |
| 10      | Design Predictive Parser for the given language.   | 02                |
| 11      | Design a LALR bottom up parser for the given language.   | 01                |
| 12      | Convert the BNF rules into Yacc form and write code to generate abstract syntax tree.  | 01                |
| 13      | A program to generate machine code from the abstract syntax tree generated by the parser.  | 01                |
